

Objectives

Probing the changing atmosphere and its impacts in Indo Gangetic Plains and Himalayan Region (AIM-IGPHim):

- **Quantification anthropogenic emission sources**
- **Study of the changing atmospheric processes over IGP and Himalayan regions**
- **Understanding the role of drivers (i.e. trace gases & aerosols) in influencing the changes in the atmospheric processes (i.e. physics and chemistry of the atmosphere) in the regions**
- **Assessment of impacts of changing atmosphere on crops, floral biodiversity and human health**
